EvoluteIQ **Agentic Automation**

AI-Native, End-to-End Process Automation—Built for the Whole Journey, Not Just the Steps

Enterprises today struggle with fragmented automation ecosystems—deploying multiple siloed tools for RPA, AI, low-code development, workflow orchestration, and system integration. EvoluteIQ solves this with a unified, full-stack platform purpose-built for native AI application development and intelligent automation. EvoluteIQ's integrated approach reduces complexity, lowers TCO, and accelerates go-to-market timelines for enterprises and service providers alike.

Why EvoluteIQ? **A More Holistic Platform**

1. Unified Automation Stack

Most organizations cobble together solutions like UiPath, Mendix, and AWS SageMaker, incurring high integration overhead. EvoluteIQ replaces this patchwork with a single platform, offering:

Native RPA bots	BPMN-based workflow orchestration
Low-code app development	Embedded AI/ML lifecycle management
Event-driven integration across systems	

Benefit: Lower complexity, faster deployment, fewer vendor silos.

2. Built-in AI + Automation Orchestration

Unlike platforms that require custom integrations to make RPA, AI, and workflow engines talk to each other, EvoluteIQ's eIQ Orchestrator unifies:

RPA bots (e.g., OCR for data extraction)	Document generation and alerts
Human-in-the-loop workflows	System APIs and third-party integrations
AI/ML models (e.g., risk scoring, forecasting)	

Example Use Case: Claims processing — from document ingestion to AI-based risk evaluation, human approvals, notifications, and customer communication — all on a single canvas.

3. End-to-End Visibility and Governance

With EvoluteIQ, enterprises and service providers gain:

Centralized governance and policy control	Single-pane monitoring across all automation components	Built-in security, compliance, and audit trail management

This dramatically simplifies the operational overhead for managing complex, multi-client environments.

4. Accelerated GTM for Service Providers

For system integrators, MSSPs, and consulting firms, EvoluteIQ delivers:

Reusable automation modules	Prebuilt connectors for SAP, Salesforce, HL7, etc.	Multi-tenant client management	Rapid prototyping and deployment

Outcome: Shift from project-based delivery to scalable, outcome-driven solutions.

3. Bridging Legacy and Next-Gen Tech

EvoluteIQ supports integration across the entire IT landscape:

| Mainframes, flat files, legacy databases | IoT and GenAI use cases (LLM agents, decision automation) | APIs, microservices, event-driven systems |

Competitive Comparison Matrix

Capability	UiPath + Mendix	Evolute1Q	OutSystems + AA
RPA	Best-in-class	Built-in	Strong
Low-code IJI	Good	Moderate	Very strong
BPM/Workflow	External	Native BPMN	Limited
AI/ML Orchestration	External tools	Fully embedded	Basic
Unified Governance	Fragmented	Centralized	Fragmented
Integration Layer	Custom build	Event-driven native	Decent
Total Cost of Ownership	High	Lower TCO	High

EvoluteIQ offers a future-ready, all-in-one platform that eliminates the friction of managing disparate automation tools. Whether you're an enterprise modernizing operations or a service provider scaling intelligent automation for clients, EvoluteIQ gives you the speed, control, and visibility to lead in the age of AI. (edited)

Unified Automation
for the AI Era

EvoluteIQ is a unified, future-ready platform that streamlines automation, giving enterprises and service providers the speed, control, and visibility to thrive in the AI era.
